# Navigating decarbonization in aviation with carbon removal solutions

### **Agenda**

Climate impacts of aviation today and the pathways toward climate-neutral aviation

- Cyril Brunner

IATA decarbonization roadmaps and milestones to reach net-zero by 2050

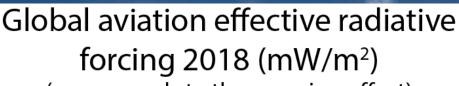

- Hemant Mistry

The value for airlines to invest now in Direct Air Capture and high-quality CDR

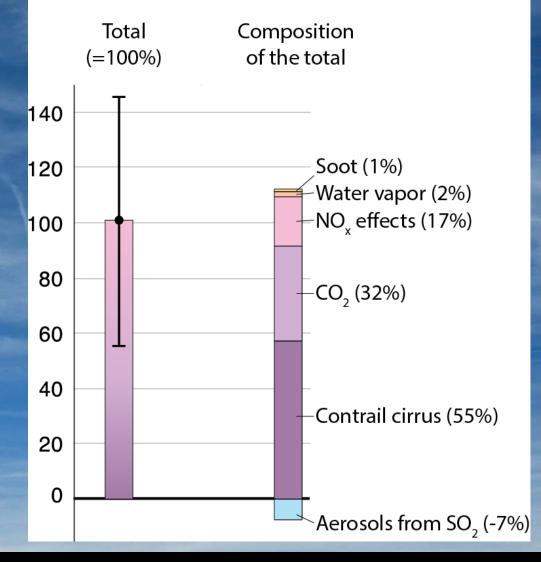

- Melanie Heiniger

**Panel and Q&A** 

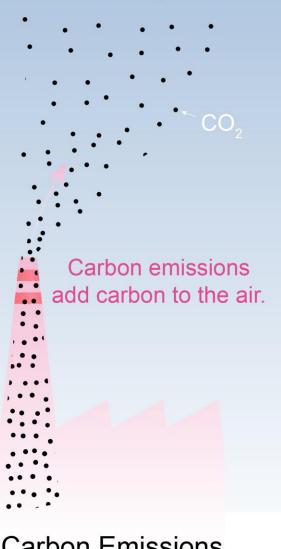

Aviation contributes ~4% to todays warming. Where does the warming come from?

(corresponds to the warming effect)

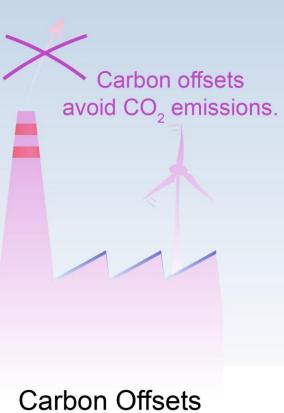

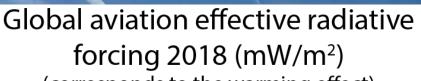

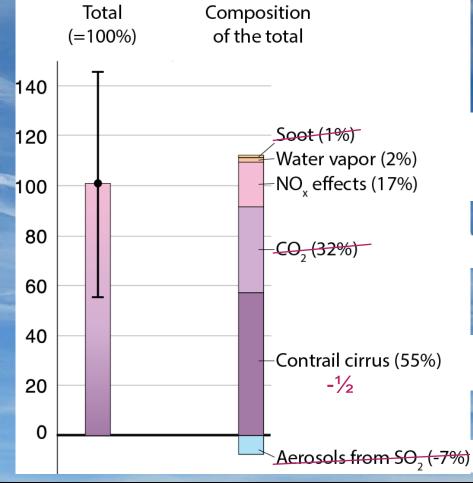

#### Climate-neutral aviation is possible. An example for SAF 2.0 + CDR:

(corresponds to the warming effect)

Cleaner combustion with SAF 2.0

Needs to be neutralized with CDR Needs to be neutralized with CDR

Combustion is CO<sub>2</sub>-neutral

Fewer aerosols with SAF 2.0, thus, less long-lived contrails

Aerosols from SO<sub>2</sub> (-7%) Cleaner combustion with SAF 2.0

Rest needs to be neutralized with CDR

CDR: carbon dioxide removal

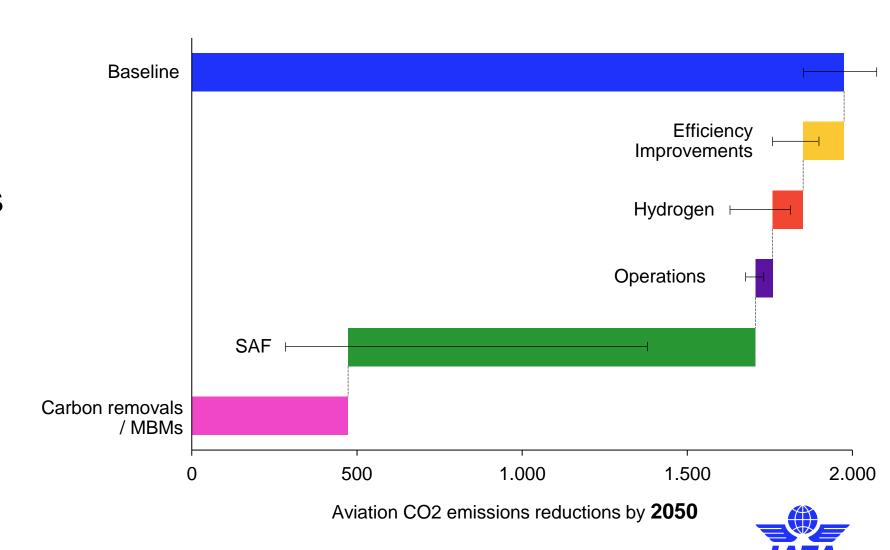

#### IATA Net Zero Roadmap: levers to get to net zero CO2 by 2050

Harmonize policies

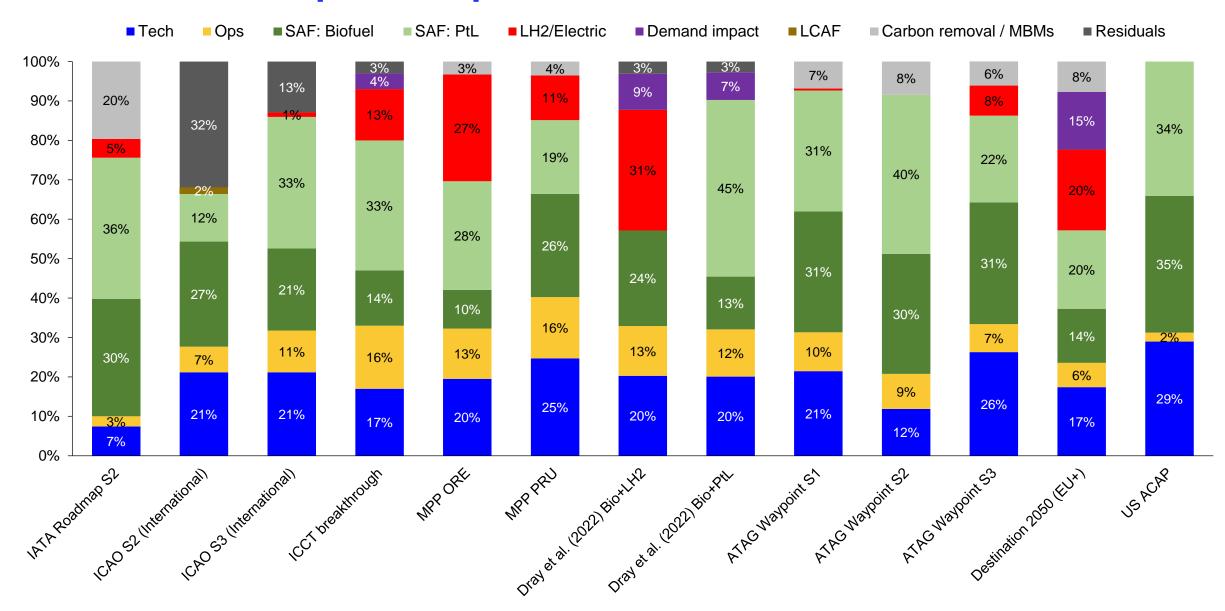

Accelerate progress

Reduce costs

Enable transition

#### Net-zero roadmaps: multiple levers in different combinations

# Thank you for joining
